## TODAY'S CAR SCORE

**1.6**

The COVID Area Risk (CAR) Score accounts for the incidence of new cases, how well current testing identifies these cases, and the rate of spread. Given the recent surges, Guam's first step has been to achieve a sustained CAR Score of 5.0 and below. The ideal long-term goal is to sustain a CAR Score of 2.5 or less, which has been shown to correlate with very low to zero COVID-related hospitalizations and deaths.
